

NPCA CW Amnesia: qsrc Optimization Gain vs. W_{eff} and N

(OBSS occ=50%, SNR=20 dB, PPDU=20 slots, 30k slots $\times$ 3 seeds)

$\star = q^*$, short W_{eff} widens $q=0$ penalty

(c) CW Amnesia penalty amplification
short W_{eff} + high $N \rightarrow$ largest qsrc gain

(a) qsrc optimization gain
 $\Delta TP = (TP_{q^*} - TP_{q=0}) / TP_{q=0}$
