

NPCA Throughput: $W_{\text{eff}} \times N$ (OBSS occ=50%, SNR=20 dB, PPDU=20 slots)

(a) Throughput vs N — qsrc = 0
short W_{eff} hurts at high N

(b) Throughput vs N — qsrc = qsrc*
 W_{eff} gap closes with optimal CW

(c) Absolute gain from qsrc optimization
largest at short W_{eff} + high N
