

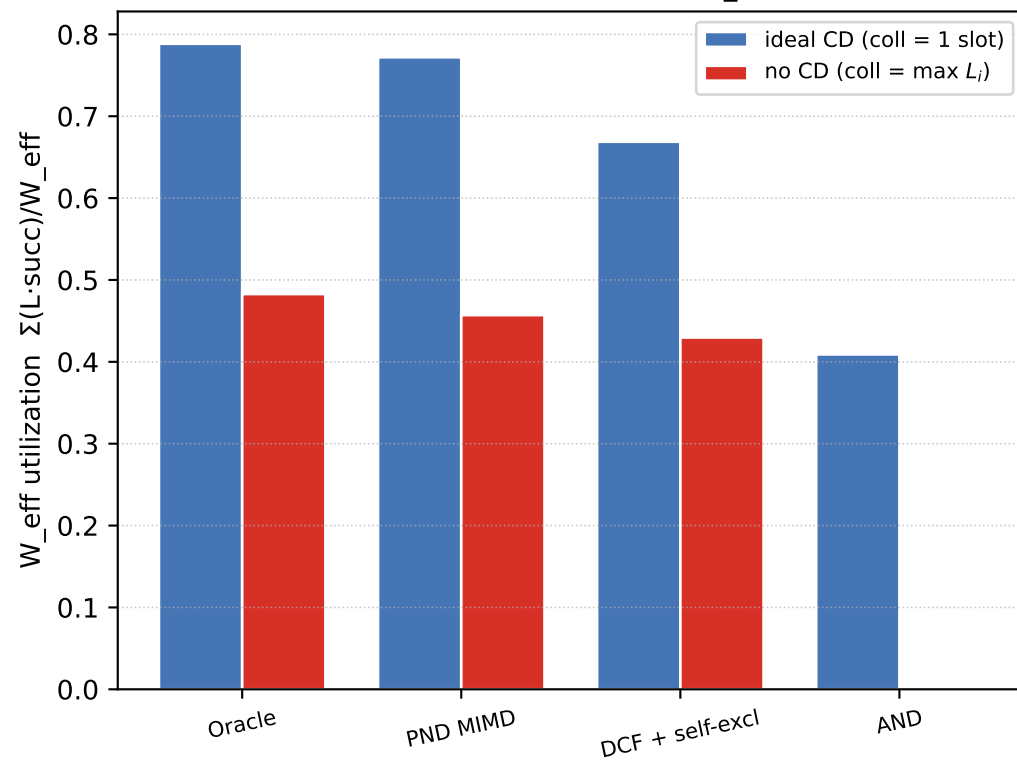

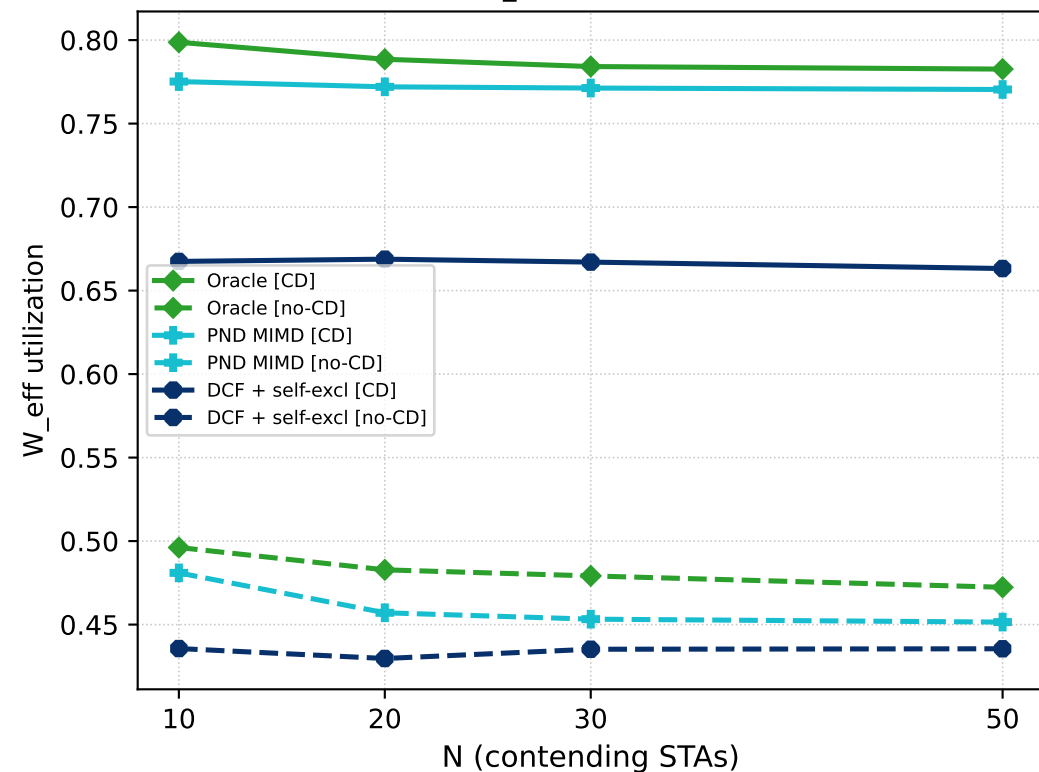

Fig. 23 Collision-Cost Model — Ideal Collision Detection vs No CD
(bimodal PPDU {4,12}, PND cc=1.2/ci=1.2; CD: collision = 1 slot, no-CD: collision = max colliding L_i)

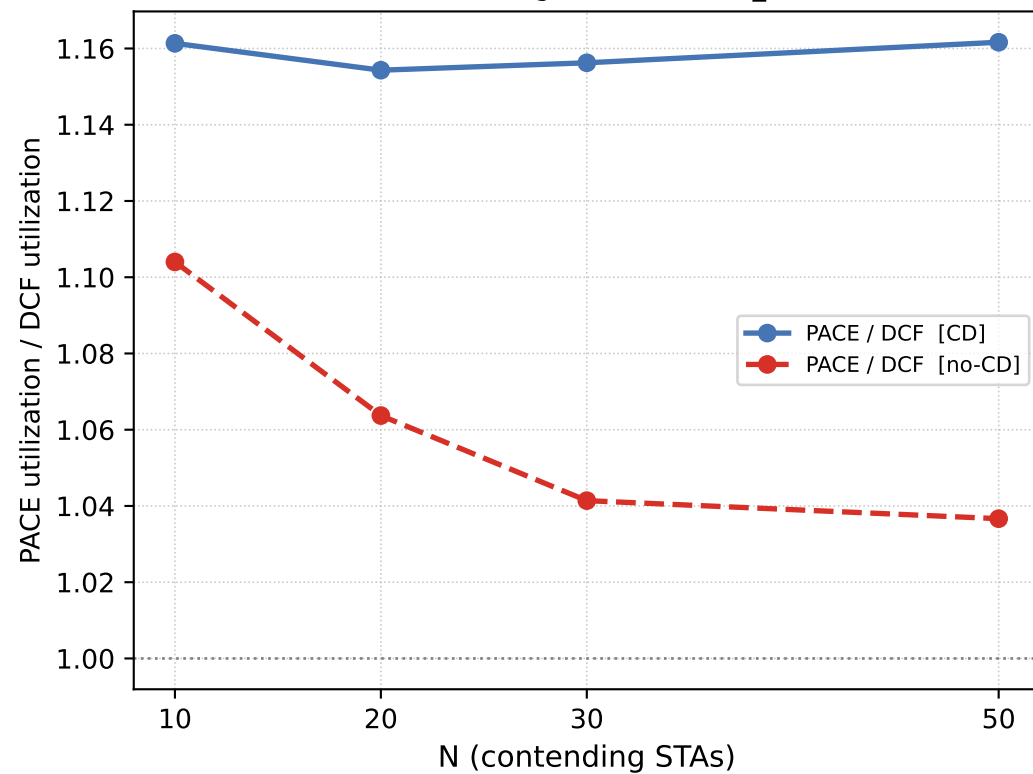

(a) Collision-cost model effect (N=20, W_{eff} =50, bimodal)

(b) Utilization vs N (W_{eff} =50; solid=CD, dashed=no-CD)

(c) PACE advantage over DCF (W_{eff} =50)

(d) Collision rate vs N (no-CD, W_{eff} =50)
