

basic_W420_v10_n20 — efficiency vs proportionality

c_{coll} fixed at 1.20 for the two references; design rule $c_{\text{idle}} = e^{C/\sqrt{W}}$, $C=7.92$

- candidates, $\rho < 1$ (visitor under-served)
- ▲ candidates, $\rho > 1$ (visitor over-served)
- Pareto frontier
- $\alpha=0.0$: $(c_{\text{idle}}, c_{\text{coll}})=(1.37, 1.11)$, $\rho=0.51$
- $\alpha=0.05$: $(c_{\text{idle}}, c_{\text{coll}})=(1.89, 1.22)$, $\rho=1.01$
- $\alpha=0.1$: $(c_{\text{idle}}, c_{\text{coll}})=(1.89, 1.22)$, $\rho=1.01$
- $\alpha=0.2$: $(c_{\text{idle}}, c_{\text{coll}})=(1.89, 1.22)$, $\rho=1.01$
- $\alpha=0.5$: $(c_{\text{idle}}, c_{\text{coll}})=(1.89, 1.22)$, $\rho=1.01$
- ☆ current: $(1.20, 1.20)$, $\rho=0.26$
- ◇ design rule: $(1.47, 1.20)$, $\rho=0.54$
