

basic_W420_v50_n10 — efficiency vs proportionality

c_{coll} fixed at 1.20 for the two references; design rule $c_{\text{idle}} = e^{C/\sqrt{W}}$, $C=7.92$

- candidates, $\rho < 1$ (visitor under-served)
- ▲ candidates, $\rho > 1$ (visitor over-served)
- Pareto frontier
- $\alpha=0.0$: $(c_{\text{idle}}, c_{\text{coll}})=(1.07, 1.49)$, $\rho=0.27$
- $\alpha=0.05$: $(c_{\text{idle}}, c_{\text{coll}})=(1.17, 1.11)$, $\rho=0.45$
- $\alpha=0.1$: $(c_{\text{idle}}, c_{\text{coll}})=(1.17, 1.11)$, $\rho=0.45$
- $\alpha=0.2$: $(c_{\text{idle}}, c_{\text{coll}})=(1.22, 1.11)$, $\rho=0.50$
- $\alpha=0.5$: $(c_{\text{idle}}, c_{\text{coll}})=(1.37, 1.07)$, $\rho=0.63$
- ☆ current: (1.20, 1.20), $\rho=0.46$
- ◇ design rule: (1.47, 1.20), $\rho=0.63$
