

basic_W420_v5_n10 — efficiency vs proportionality

c_{coll} fixed at 1.20 for the two references; design rule $c_{\text{idle}} = e^{C/\sqrt{W}}$, $C=7.92$

● candidates, $\rho < 1$ (visitor under-served)

▲ candidates, $\rho > 1$ (visitor over-served)

— Pareto frontier

● $\alpha=0.0$: $(c_{\text{idle}}, c_{\text{coll}})=(1.05, 1.66)$, $\rho=0.06$

● $\alpha=0.05$: $(c_{\text{idle}}, c_{\text{coll}})=(1.49, 1.11)$, $\rho=0.72$

● $\alpha=0.1$: $(c_{\text{idle}}, c_{\text{coll}})=(1.49, 1.11)$, $\rho=0.72$

● $\alpha=0.2$: $(c_{\text{idle}}, c_{\text{coll}})=(1.66, 1.66)$, $\rho=0.79$

● $\alpha=0.5$: $(c_{\text{idle}}, c_{\text{coll}})=(1.66, 1.05)$, $\rho=1.02$

☆ current: $(1.20, 1.20)$, $\rho=0.18$

◇ design rule: $(1.47, 1.20)$, $\rho=0.60$
