

rts_W1680_v10_n20 — efficiency vs proportionality

c_{coll} fixed at 1.20 for the two references; design rule $c_{\text{idle}} = e^{C/\sqrt{W}}$, $C=10.15$

● candidates, $\rho < 1$ (visitor under-served)

▲ candidates, $\rho > 1$ (visitor over-served)

— Pareto frontier

● $\alpha=0.0$: $(c_{\text{idle}}, c_{\text{coll}})=(1.13, 1.05)$, $\rho=0.94$

● $\alpha=0.05$: $(c_{\text{idle}}, c_{\text{coll}})=(1.13, 1.05)$, $\rho=0.94$

● $\alpha=0.1$: $(c_{\text{idle}}, c_{\text{coll}})=(1.13, 1.05)$, $\rho=0.94$

● $\alpha=0.2$: $(c_{\text{idle}}, c_{\text{coll}})=(1.13, 1.05)$, $\rho=0.94$

● $\alpha=0.5$: $(c_{\text{idle}}, c_{\text{coll}})=(1.13, 1.05)$, $\rho=0.94$

☆ current: $(1.20, 1.20)$, $\rho=0.93$

◇ design rule: $(1.28, 1.20)$, $\rho=1.53$
